Why should I choose a USB 3.0?

Have you ever had to deal with speed-related issues when using a USB interface? A low read and write speed can really test our patience. This probably happens because you didn't know that there is a valid alternative, and it's called USB 3.0.

USB 3.0 technology has revolutionized the external memory drive market, as it provides great advantages in terms of performance.

What advantages?

— Data transfer speed.

This is the main advantage: in terms of numbers, we're talking about a speed that is ten times faster than USB 2.0 technology. However, it must be noted that such speeds can only be reached if the USB port being used supports this technology.

— Compatibility.

Cables and flash-drives that use 3.0 technology are backwards compatible, which means that they can easily be used with USB ports that have 2.0 technology.

How to recognize?

Aesthetically, there is a way to distinguish between a 3.0 and a 2.0 port or connector. The contacts base on the inside is blue, whereas for the latter it is white.

Search in our catalogue for USB flash-drives with 3.0 technology, look for the 2.0/3.0↔ mark and find all the models available!
